## Repeated Course Enrollment - Fall 2012 Through Spring 2015

Repeated enrollment in courses due to previous failure or to improve a substandard grade has a substantial impact on student success, increasing time to degree, and either limiting the availability of seats for other students or requiring the institution to offer more seats, which negatively impacts the budget. This report, in conjunction with our recent reports on high failure rate courses and course attrition, provides information that can guide planning to improve course retention, success and completion.

## Methodology

For this study we examined the number of enrollments in all non-repeatable courses offered between Fall 2012 and Spring 2015. In summer 2012 the California Community Colleges Board of Governors adopted regulations that limited the number of times a student could repeat a class to make up for a substandard grade (D, F, NP, W, or FW) to three times. These courses are what we refer to in this study as non-repeatable courses. Repeatable courses-those for which students are allowed to repeat multiple times for credit-were omitted. Most repeatable courses include physical education, performing and visual arts classes, and courses for certificate programs such as automotive technology and court reporting.

Each time a student enrolled in a non-repeatable course for credit more than one time during that 3year time period (Fall 2012 through Spring 2015) was counted as a repeated enrollment. We looked at enrollment over the 3 -year period to ensure that the data were recent enough to inform planning.

This study shows the overall average percent of repeated enrollments for all courses offered and courselevel repeats for a selected set of courses, those which were included in our recent analyses of high failure rate courses and course attrition. These are courses with >=70 enrollment for half of the 6 Fall/Spring semesters during the 3 -year period. After omitting repeatable courses this resulted in 39 high-enrollment courses. Table 1 shows the course enrollments and repeats for those 39 courses. Table 2 shows data on a subset of all courses for which the percentage of repeat enrollments was exceptionally high. Table 3 shows repeat enrollments for the 14 courses identified as high-failure rate courses in our previous study.

## Findings

There were a total of 70,654 enrollments in non-repeatable courses between Fall 2012 and Spring 2015. Of these enrollments, $5.9 \%$ were repeated enrollments-that is, a student was taking the course for the second or third time during that time period.

Of the 39 high-enrollment courses (Table 1), 16 courses-including 5 Math, 5 English, and 2 Biology courses- had repeated enrollments higher than the $5.9 \%$ average.

The largest percentage of repeated enrollments in high-enrollment courses was in MATH103 (17.9\%) and MATH101 (17.8\%) and the lowest were NE90 (1.1\%) and BEHS103 (1.2\%) (Table 1).

Table 1. Repeated Course Enrollments-Courses Averaging >=70 Enrollment (Fall 2012-Spring 2015)

| Course | First-Time Course Enrollments | Second-Time Course Enrollments | Third Time or More | Total Course Enrollments | Total repeats | Repeats as \% of total enrollments |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Source: COM MIS Files, December 2015.

Table 2 shows the courses with the highest repeated enrollment of all the non-repeatable courses offered (regardless of the total enrollment size). Eight courses-7 of them Math courses and one English course-had $18 \%$ to $33 \%$ repeated enrollments.

Table 2. Courses With Highest Repeated Enrollment (Fall 2012-Spring 2015)

|  | First-Time <br> Course <br> Enrollments | Second- <br> Time <br> Course <br> Enrollments | Third <br> Time or <br> More | Total <br> Course <br> Enrollments | Total <br> repeats | Repeats as <br> \% of total <br> enrollments |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| MATH103Y | 145 | 60 | 12 | 217 | 72 | 33.2 |

| MATH109 | 308 | 58 | 10 | 376 | 68 | 18.1 |

Of the courses identified in our previous study as high failure rate, all but one are non-repeatable. Of the remaining 13,9 have higher than the $5.9 \%$ average of repeated enrollments (Table 3). Courses required for graduation, transfer, and/or several AA/AS degrees-English, Math and Biology-had the highest percentage of repeated enrollment. BEHS103 and CIS101 had much lower than average repeated enrollments.
